

Draw Your Own Satellite

NASA has asked you to draw and color the next satellite that will be launching into space.

What does your satellite look like?

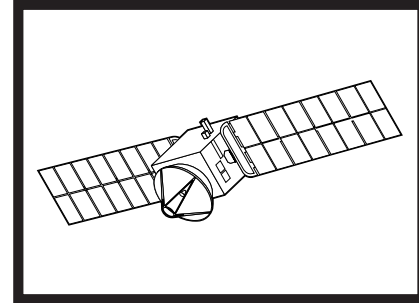

Where is it going?

How far is it traveling?

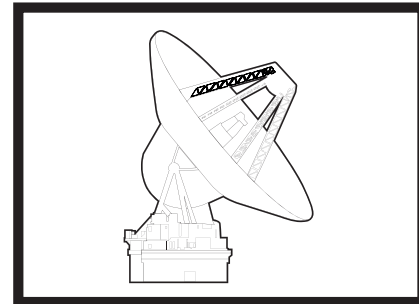

What you must include in your drawing:

- An antenna so it can communicate with the Earth
- Solar panels so it has energy to perform its tasks
- A computer box to feed all the information and perform its functions

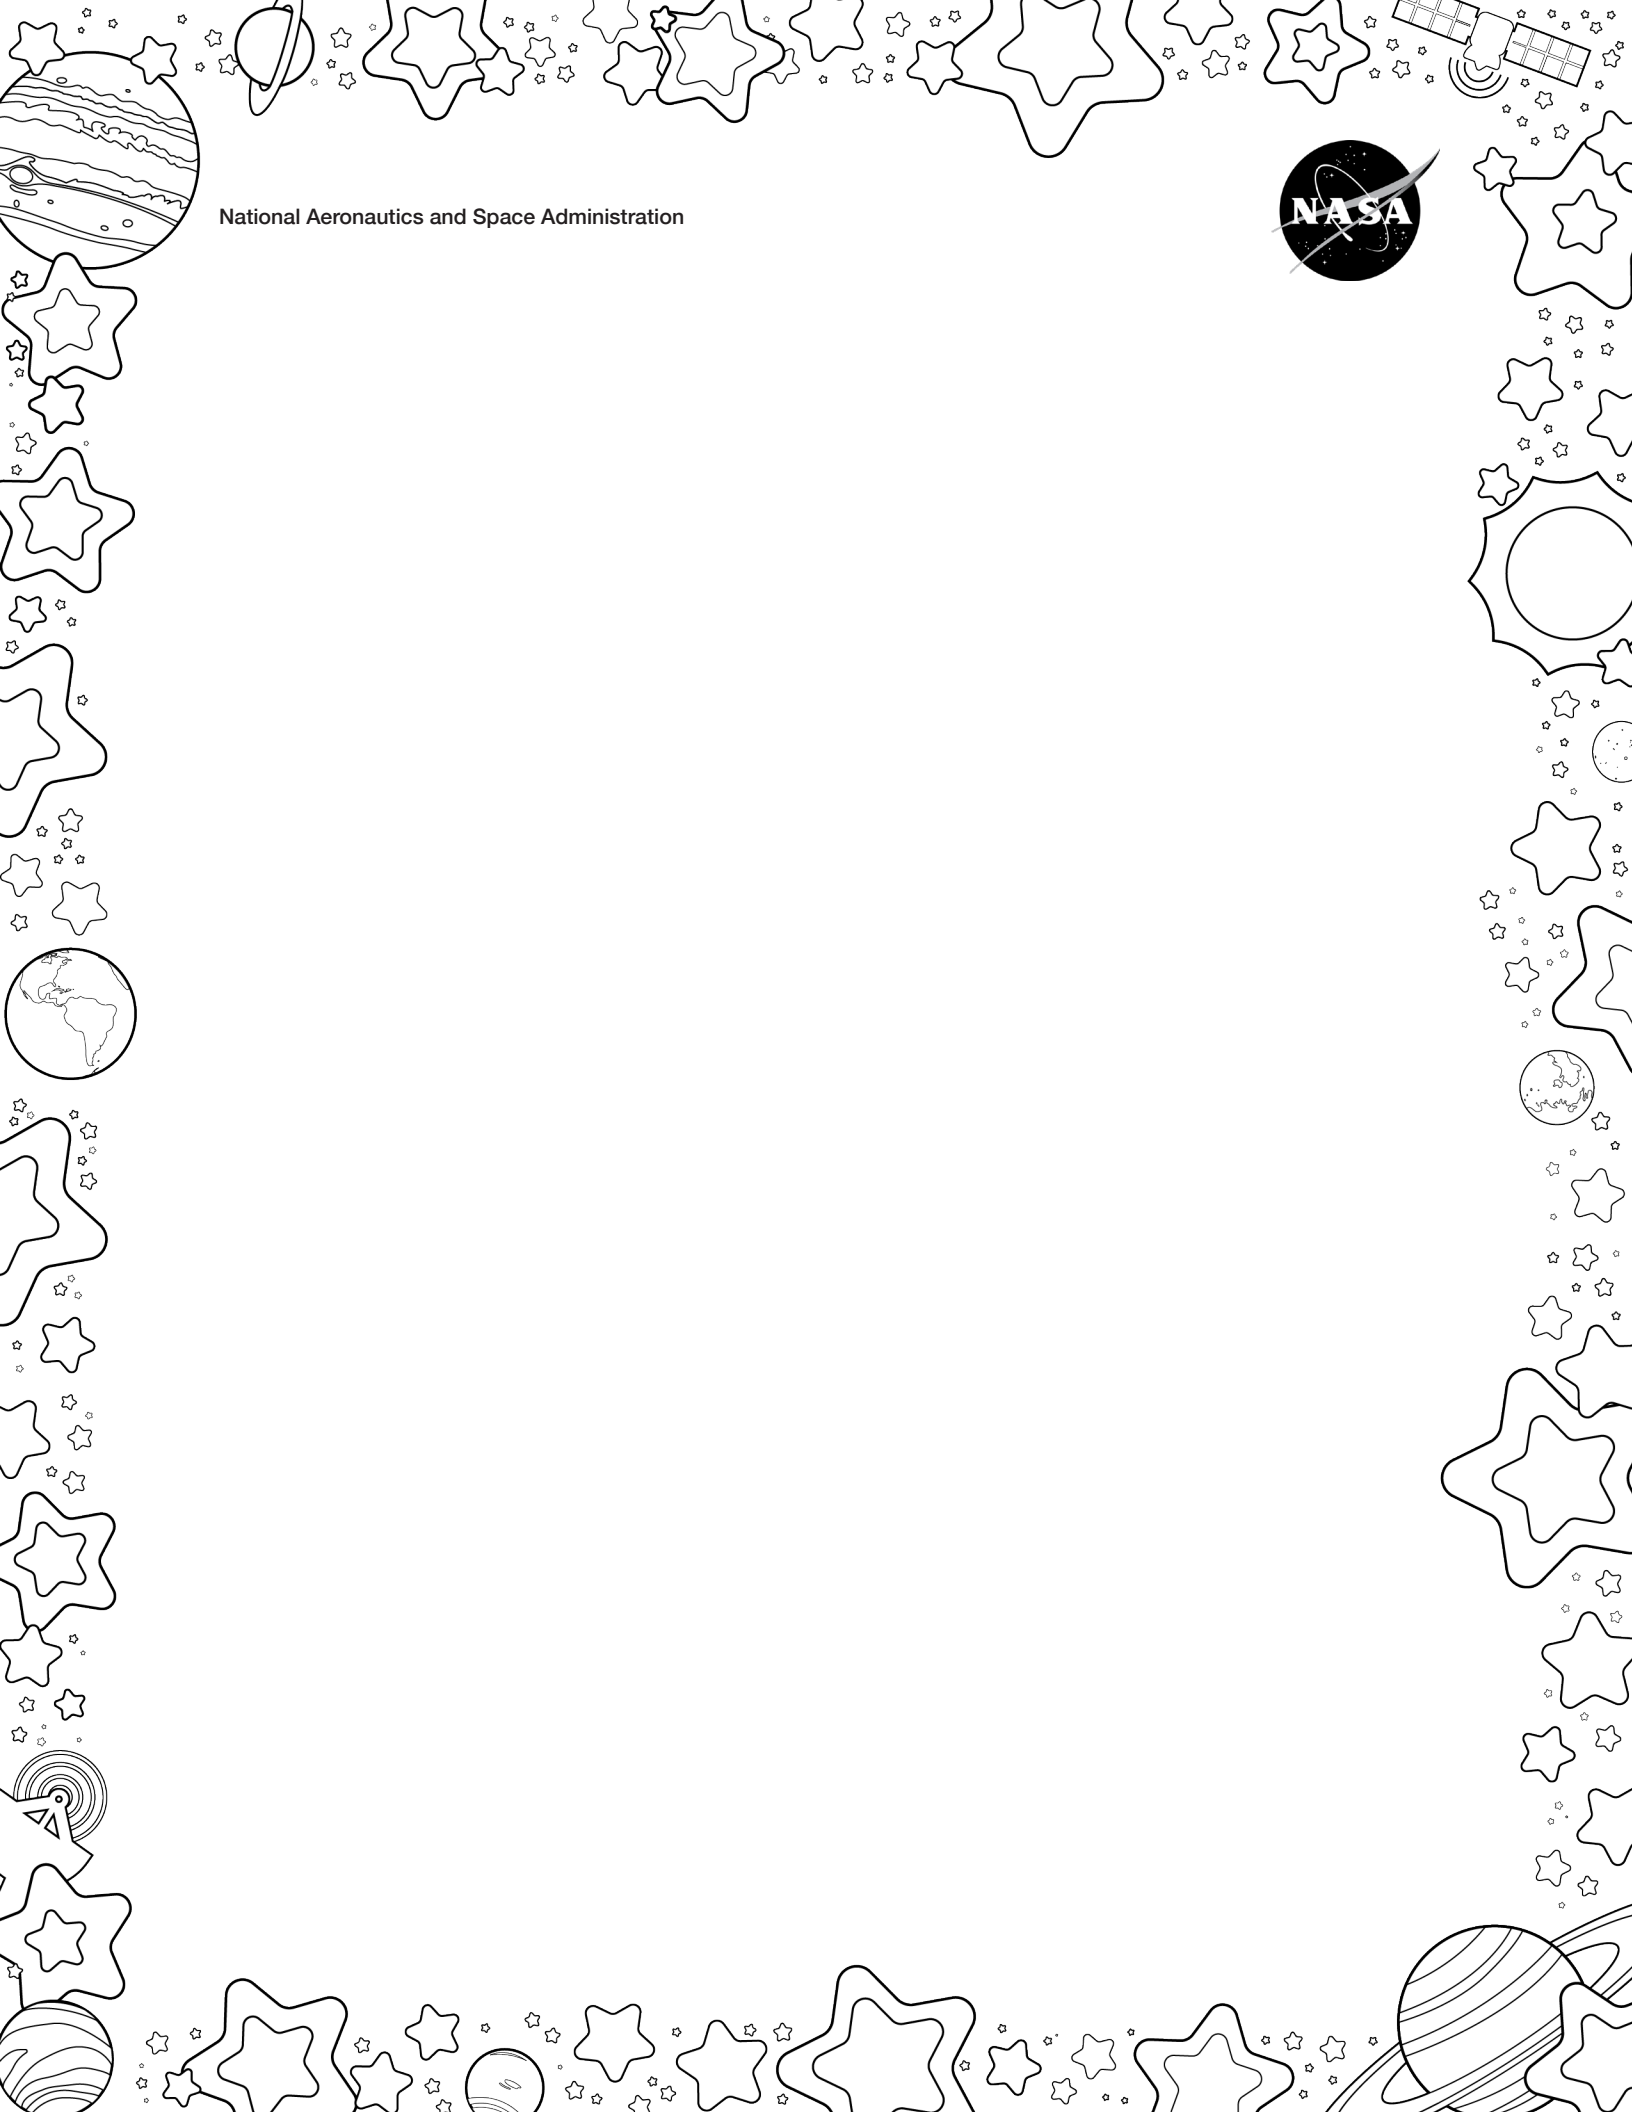

If you need more space, you may continue your drawing on the back of this page.

This is an example of a satellite.

This is an example of an antenna.
