

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION
WASHINGTON, D.C. 20546

OFFICE OF THE ADMINISTRATOR

September 21, 1973

Mr. Bruce T. Lundin
Director
Lewis Research Center
National Aeronautics
and Space Administration
21000 Brookpark Road
Cleveland, OH 44135

Dear Bruce:

The Lewis "inspection" -- "Technology in the Service of Man" -- was absolutely outstanding!

I have nothing but praise for every facet of it; the subject matter, the way it was presented, the displays and demonstrations, the speakers, and the logistics were all great. I heard many comments, from both NASA people and from our outside guests, and all of them were favorable, expressed in superlatives.

If I have to single out one element of the tour, above all others, it would have to be the speakers -- the young men who demonstrated so well that NASA is still the best high technology agency in the world.

Please pass on my congratulations and sincere appreciation to all who were responsible for this outstanding event.

With best regards,

Sincerely yours,

George M. Low
Deputy Administrator

FLIGHT RESEARCH CENTER

OFFICE OF THE DIRECTOR

Dear Bruce,

Your inspection was outstanding! I felt like I was back in NACA. I wanted to put on my NASA badge to be sure that visitors knew I was related to the group putting on the show.

You've set a tough precedent for those who follow.

Get personal regards,
Lee

October 24, 1973

Dr. Bruce Lundin
Director
NASA Lewis Research Center
21000 Brookpark Road
Cleveland, Ohio 44135

Dear Bruce:

Although this letter is three weeks overdue, I still want to take the time to write you my sincere appreciation for the splendid program you put on for the visitors to Lewis Research Center on September 19-21, 1973. In my memory, there has never been a better job of presenting to the public the programmatic activities of an agency. The speakers were clear and crisp, and your visual aids and demonstrations were nonpareil.

As I understand it, what Lewis was undertaking to do here was revive the fine old NACA tradition of biennial visitation. One can hope that the torch will now be picked up by several of the other centers, so that we can all have an opportunity to learn both about the applications of your work to domestic problems, and about new developments in aerospace. All good luck to you in this vital enterprise.

With warmest personal regards,

Cordially yours,

Holt

AMERICAN
INSTITUTE OF
AERONAUTICS AND
ASTRONAUTICS

Dear Mr. Lundin:

I wish to express my appreciation for the outstanding presentations of your Open House, "Technology in the Service of Man." Every aspect of the full day was performed to perfection with heart warming courtesy.

The need for communicating the benefits of technology to the public has been a considerable concern of mine for some time. If I might, may I suggest consideration of a television documentary to provide broader understanding. Similarly, availability of this message on film for public school usage would help the new generation have perspective in the origins and requirements for improved standard of living.

In summary I want to add my word of congratulations for a superior job of communications and encouragement to even expand the audience.

Sincerely,

William E. Simpkin, Chairman

Dear Mr. Lundin:

We here at Atkins & Merrill who attended the program "Technology in the Service of Man" on Wednesday, September 19, wish to express our sincere appreciation to the personnel at Lewis Research Center for the excellent job that was done in making our visit most comfortable and indeed interesting.

We were impressed with your strides made in Advanced Research and Development and wish you continued success. We take pleasure in the knowledge that Lewis Research Center intends to continue its efforts into the years to come.

Thank you again for your invitation to inspect your facilities. We trust that we may be able to coordinate our own Advanced Research and Development efforts with NASA Lewis in the future.

Sincerely,

Dear Bruce:

I attended your open house "Technology in the Service of Man" on September 20. I was impressed and want to thank you for inviting me. It was evident from the displays, the ability of the speakers, and the organization and scheduling that a lot of thought and care went into its preparation. Only a couple of brief times did I get the feeling that your people were trying too hard to sell. I found the whole affair to be interesting and informative.

Both NASA and the aerospace industry need to present themselves well to congress, the public, and the press, as well as to one another, to improve our combined reputations. You have taken a good step in that direction. Congratulations!

Sincerely,

W. T. Hamilton

Dear Bruce:

May I express to you and your associates at Lewis Research Center my thanks for a most enjoyable and informative day on the occasion of your program, "Technology in the Service of Man", on Wednesday, September 19th. I can assure you, based on the comments from a number of business acquaintances whom I saw at the open house, that they shared my gratitude.

I particularly felt that, at least in my own case, you accomplished much towards lifting the veil that usually shrouds scientific enterprises and I was particularly gratified to learn that so much attention is being paid to so many everyday problems that are bugging us all so much. It's comforting to an individual as well as to a corporate tax payer that our terrestrial problems are receiving as much attention as they are.

Sincerely yours,

Dear Dr. Lundin:

I would like to thank you for a most informative and enjoyable day spent yesterday at Lewis Research Center while attending the program, "Technology in the Service of Man."

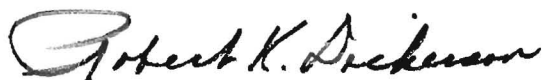

You and the Lewis Research Center and Other NAS personnel who participated in the planning and execution of the program are to be congratulated on the broad scope of material, quality of the presentations and adherence to the precise schedule which moved the program along very smoothly.

NASA is involved in some wonderful programs for the betterment of life for all mankind through the application of techniques and knowledge derived from space projects and other scientific endeavors. NASA has a record to be proud of, a fine story to tell and told it very well through this program.

Again, thank you for all of the courtesies extended to me and for a fine program.

Very truly yours,

Dear Dr. Lundin:

Your program on Technology in the Service of Man, which I was privileged to attend on September 21st, was a rewarding experience. It was inspiring to hear so many dedicated researchers explain their projects in a way everyone can understand.

The experience was particularly helpful to me because I am frequently called upon to do research and writing in the field of the impact on society of science and technology. Usually I work on international space activities for the Senate Committee on Aeronautical and Space Sciences, and have been impressed that international space cooperation depends upon a strong national program. There were several briefings during your program which were helpful to me. The State Department appointed me an advisor to the United Nations Working Group on Direct Broadcast Satellites and I spent two weeks with the U. S. Mission in New York, and I have Congressional requests for this subject. The National Academy of Sciences/National Academy of Engineering invited me to participate in a panel on the methodology of assessing the impact on the climate of a fleet of high-altitude planes (University of California, San Diego, in La Jolla) in August. I was on the panel concerned with social, economic and political effects with particular reference to political science and international law. And I am giving a paper at the International Astronautical Federation congress in Baku, USSR on Remote Sensing of the Earth by Satellites: Legal Problems and Issues. This will be at the Colloquium on the Law of Outer Space held by the International Institute of Space Law.

It was very important to me to see the hardware and hear about what is being done at the Lewis Research Center for I do not like to be confined to information from books and documents.

With appreciation,

Sincerely yours,

Eilene Galloway

Miss Marilyn Zering
c/o NASA Lewis Research Center
Mail stop 3-16
Cleveland, Ohio 44135

Dear Marilyn:

I feel inspired by the day I spent at the Lewis Research Center being briefed on Technology in the Service of Man. It is very reassuring to meet so many highly motivated researchers, and it makes one feel that everything is going to turn out happily in the end.

The Civil Service Commission has asked me to give a lecture at Oak Ridge, Tennessee on the relationship between executives with programs in the Executive Branch and the Congress with particular reference to informing them about all aspects of Congress. They wanted this in October, but I am going to the USSR to attend the IAF Baku conference on October 5th, so the date has been set in January. It was helpful to me to see the results of the research programs, and having had experience here with authorizing and appropriating funds, I think now I have some new examples of executive-legislative relations.

I am glad you are back with NASA. Without the kind of work being done at the Lewis Research Center it would be impossible to have a program of international space cooperation. // ←

Gentlemen:

As a recent guest at your public program I take this opportunity first to thank you for the experience and exposure and then to offer some random observations.

The overall effect of the day-long program was one of great efficiency, economy of movement and technical proficiency.

As a non-technically oriented lawyer, I found the individual programs complex enough to insure my attention and concentration; not so detailed as to distract me.

Recognizing that at least one of several objectives of the program was to impress upon Congress and the voting public the non-space oriented technical advances spun off from research projects and their impact on the public in general, I would suggest a more prominent display in technical roles of both women and minorities; a subject certainly Congress is sensitive to and may even be concerned with.

Sincerely yours,

Neil McGinness
Director, Community Development

On behalf of all the Langley people who visited the Lewis Open House, I would like to thank you and tell you how impressed we all were. On the plane returning home, we all revisited the several stops and compared notes. Everyone was bubbling with enthusiasm for the manner in which your staff conducted the affair; but more importantly, we felt that without exception, the presentations really got the message across concerning your significant contributions.

We were proud to see credit given for the joint efforts of Langley and Lewis; your choice of timely topics gave us all a boost. The only sobering thought was the fact that Langley will be expected to compete with your fine performance.

Thanks for the hospitality.

Sincerely,

Oran W. Nicks
Deputy Director

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION
WASHINGTON, D.C. 20546

REPLY TO
ATTN OF:

SEP 25 1973

Mr. Bruce T. Lundin
Director
Lewis Research Center
National Aeronautics and
Space Administration
21000 Brookpark Road
Cleveland, OH 44135

Dear Bruce:

After we talked this afternoon on several subjects you had on your list and I again complimented you on the Lewis inspection, I read George Low's letter to you (copy enclosed).

I can see now that as pleased as I was with the small part I saw, I was so busy helping your guys sell Pat Mooney on NASA that I really didn't see the inspection with "eyes" like George's. I wished I could have, but then selling NASA to OMB is also important.

Please let me just say that from all I know and have heard, I can underscore all that George has said.

I compliment Bruce Lundin and the complete Lewis staff.

With warm personal regards,

Sincerely,

Roy P. Jackson
Associate Administrator for
Aeronautics and Space Technology

Dear Mr. Lundin:

I was most impressed by my visit to Lewis on September 19 to hear and see your program on "Technology in the Service of Man".

It is gratifying to learn that real progress is being made in coping with the problems associated with our environment and resources.

Thank you so much for including me on your guest list. I hope that an updating session will be forthcoming in the not too distant future.

Very truly yours,

Dear Bruce:

I want to thank you for inviting me to your "Technology in the Service of Man" program. My visit on Wednesday was thoroughly enjoyable and very informative.

I would also like to congratulate you on the way that the program was managed and the very professional way in which the well rehearsed presentors discussed the activity in each of the labs we visited. A bonus benefit was the opportunity to renew acquaintances with many NASA and industry personnel, some of whom I haven't seen for several years.

Yours truly,

F. D. Applegate - Director

Dear Bruce:

Just a note to let you know I thoroughly enjoyed the recent inspection day at the Lewis Research Center. While I am a relatively frequent visitor to the Center, I rarely get the chance to do more than just focus on the subject of the day. The opportunity to get a broad overview of your activities was most appreciated.

I want to also take this opportunity to remind you that it has been a long time since you visited the Aircraft Engine Group in Evendale. I believe you would find our advanced technology activity, much of it funded by NASA, of great interest. I am sure that Mike Toth, our Cleveland representative, would be happy to arrange for such a visit that would be consistent with your crowded schedule.

Sincerely,

Mozzie

Dear Mr. Lundin:

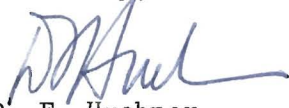

Thank you very much for affording me the opportunity to attend your recent program, "Technology in the Service of Man".

I regarded the proceedings as being extremely informative, very professionally presented, and very comprehensive.

Aside from imparting a great deal of useful technical information, I felt that the presentations did much to create an aura of good will and understanding between NASA-Lewis and the attendees.

Again, thank you and be assured that I am looking forward to NASA-Lewis's next open house.

Sincerely,

D. F. Huebner

Dear Bruce:

Once again I would like to express my appreciation for having been given the opportunity to attend your Program, "Technology in the Service of Man," on Friday, September 21.

This was an outstanding program and was conducted in a very professional manner. The arrangements, logistics and timing were excellent and the quality of the presentations was outstanding. I have been attending NASA, and formerly the NACA briefings of this type for over twenty years and sincerely feel that this one topped them all. It was a most interesting and very worthwhile day for me.

I enjoyed visiting with you at the close of the session and I hope I will have the pleasure of seeing you again on my next visit to Cleveland.

Sincerely yours,

Dear Mr. Lundin:

On behalf of the Cleveland Section of the IEEE, I want to thank you for making the NASA - Lewis facilities available for our first Section meeting which was held on the evening of September 19, 1973. Our more than one hundred members and guests very much enjoyed this opportunity to become better acquainted with the work at your laboratories. The presentations "Technology in the Service of Man" were given in a highly professional manner. The excellent preparation and organization of the tour made your hospitality even more enjoyable.

Please extend our sincere appreciation to the many employees at your facility that made this evening a success by contributing of their personal time. You will find their names on the attached list.

I hope that these open-house presentations will also prove to be successful from your point of view.

Sincerely,

Dr. Pieter G. Cath
Chairman

Dear Bruce:

Thank you so much for your invitation for Captain Mitchell to attend your program at Lewis. He was out of town when your letter arrived and will not be back until the end of this week. That does not excuse the tardiness of our responding and for that I am so sorry. Your letter somehow got misplaced and did not come to my attention until today. Please know, however, that he was not in your area so that the goof on my part did not cost you his presence.

Again, thank you for thinking of Captain Mitchell. The theme of your program is certainly the topic he spends all of his time promoting. The Institute of Noetic Sciences is in a large part dedicated to the careful stewardship of our planet.

Enclosed, is some information on the Institute. Hope you find it informative.

Sincerely,

Anita Rettig
Assistant to the President
Director Press/Public Affairs

P.S. Please give our best to Marilyn. I enjoyed meeting her during her visit last winter to Houston, and Ed & I were pleased to have spent an enjoyable dinner with her.

October 19, 1973

Mr. Bruce T. Lundin
Director, Lewis Research Center
NASA
21000 Brookpark Road
Cleveland, Ohio 44135

Dear Mr. Lundin:

This letter is written to thank you for the invitation to your program "Technology in the Service of Man", and for the hospitality extended during the visit to your Center on September 21, 1973. Actually, I came on behalf of our University's School of Engineering and Applied Sciences and its Dean R. G. Jahn, who was attending another NASA function in Washington at that time.

Several scientists of your NASA Lewis Research Center are well known to us, since we have enjoyed the privilege of support by a NASA grant from NASA Headquarters for our Electric Propulsion Laboratory in the Department of Aerospace and Mechanical Sciences under R. G. Jahn, for more than the last ten years. The exchange of technical information and ideas over this period of time has, of course, been particularly intense with the scientists of your Research Center in some of the areas of W. E. Moeckel's interest and responsibility.

The presentations of the program were therefore instructive and very successful in exhibiting the capabilities in other areas of research in your Center, where remarkable achievements have been accomplished with which I had not previously been familiar.

The presentations were impressive, crisp and clear and, I believe, very effective in conveying the significance and advances in the selected research areas to the visitors. I thoroughly enjoyed not only the intelligence of the demonstrations, but also the high quality and skill of the presentations and like to offer my compliments to you and the other members of your Research Center who conceived this program and participated in it.

Rec'd 10-23

October 19, 1973

It is not quite clear to me in which more direct way I could be helpful in furthering the utilization and application of your Center's achievements and capabilities. Of course, I have reported on my visit to the Dean of the Engineering School and to some of my colleagues, as well as I shall mention what I remember to our students at appropriate occasions. Besides the highly technical curricula in Engineering at our University, there are now available to students also, programs in energy, transportation, environment and bioengineering, to mention but a few. These relatively new areas of study for recent and present student generations appear to parallel to a considerable extent the subject areas which were exhibited in your program, and may provide young men and women with the needed capabilities and potential for present and future challenges. This comparison could be extended to some thoughts of further implementation of the achievements and capabilities in the subject areas in your Center and, on the other hand, of the relevance of the education of young men and women in our Engineering School. This could be thought to be done in the form of sponsorship of certain projects, mutual exchange working visits and special fellowships.

The program on "Technology in the Service of Man" has been one of the finest which I attended and I appreciate to have been invited to it.

Very sincerely yours,

Woldemar F. von Jaskowsky

WESTLAKE, OHIO 44145

Dear Bruce:

I appreciated the opportunity to attend the Lewis Inspection and to be brought up to date on your activities and your accomplishments. The show was well done, as always, and I thoroughly enjoyed the day.

The diversity of the Lewis program and the benefits to mankind came out loud and clear in the presentations. Without exception, the comments from the members of my group were very complimentary.

Thanks for inviting me.

Sincerely,

Iw

DEPARTMENT OF THE AIR FORCE
HEADQUARTERS ARNOLD ENGINEERING DEVELOPMENT CENTER (AFSC)
ARNOLD AIR FORCE STATION, TENNESSEE 37389

24 September 1973

Mr. Bruce Lundin
Director
Lewis Research Center
Cleveland, Ohio 44135

Dear Mr. Lundin

Mr. Don Eastman and I want to express our appreciation to you and the members of your staff for the excellent series of presentations and your personal courtesies last Thursday, the 20th of September. Your presentation of Technology in the Service of Man was exceptionally well done. Everyone in the silver group, including Joe Jones and Grant Hansen, was impressed with the manner in which the presentations were made. It certainly gave me a much better appreciation of the capabilities of the Lewis Research Center.

As we briefly discussed at lunch, I look forward to a continuing exchange of information between Arnold Center and Lewis. It is obvious that each of us has a great deal to gain by maintaining close coordination on improvements in instrumentation techniques, data processing and simulation facility utilization. I have asked Don Eastman to stay in touch with you and Mr. Bernie Lubarsky to assure that we continue to have a periodic forum to exchange ideas.

Again, thanks for your hospitality.

Sincerely

A handwritten signature in cursive script, reading "Bill English", is written over the typed name and title.

September 27, 1973

Dr. Bruce T. Lundin
Director
National Aeronautics and Space Administration
Lewis Research Center
Cleveland, Ohio 44135

Dear Dr. Lundin:

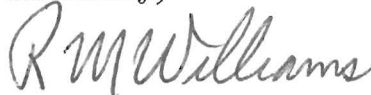

The periodic presentations by NASA of the work of the various Laboratories is always of great interest. I have attended many of these and invariably have been impressed by the quality of the presenters and by the effectiveness of the demonstrations.

The one which you put on last week was outstanding. Many of the attendees expressed the opinion that a television documentary of outstanding interest and value could be made simply by recording the presentations; I agree.

As you are undoubtedly aware, we have a more than casual interest in fatigue predictions since our second failure of a large compressor. The Strainrange Partitioning Technique which your people discussed has potential value in analyzing the failures and, hopefully, giving us the courage necessary to operate the remaining machines which have just been repaired. I would very much appreciate an opportunity to send Dr. David Fenton and perhaps one or two other people up for a discussion on this matter with those people directly involved. We can arrange this on short notice at any date acceptable to you and your people.

Again, thanks for a most interesting and useful day.

Sincerely,

R. M. Williams
President

October 11, 1973

Mr. R. M. Williams
President
Arnold Research Organization, Inc.
Arnold Air Force Station, TN 37389

Dear Mr. Williams:

Thank you for your thoughtful comments of September 27 on our program "Technology in the Service of Man".

With regard to your inquiry about sending Dr. David Fenton and others here to discuss "Strainrange Partitioning Technique", arrangements should be made directly with Mr. Samuel S. Manson, area code 216/433-4000, extension 268. Mr. Manson's calendar shows availability October 15 and 16, although you should confirm any appointment with him. I believe it would be helpful to engage our people from our Fan and Compressor Branch for these discussions and we are advising Mr. Manson to coordinate such participation with the Chief of that Branch, Mr. Melvin Hartmann. I hope we can be helpful to you on your compressor problems.

Thanks for your interest in NASA and the Lewis Research Center.

Sincerely,

W by J. Burnett for

September 24, 1973

Mr. Bruce Lundin, Director
Lewis Labs
Lewis Research Center
Cleveland, Ohio

Dear Bruce:

It was indeed a pleasure to be included in your "inspection" last Thursday at Lewis -- as always, it was a productive and meaningful day, and your troops did their usual fine job.

At the risk of burdening you with correspondence (and please don't bother to acknowledge this note!), I would like to make a few suggestions for your consideration and that of your associates involved:

1. With respect to the measurement of air pollution in the Cleveland area, I wonder if it would not be meaningful to locate several of the sensor stations both upwind and downwind from Cleveland Hopkins so that we can ascertain whether or not the airport itself is a contributor to the air pollution problem. Our experience to date at JFK indicates that it is not, but I would assume your program is more sophisticated and would give us better results than anything done heretofore.
2. I was very much interested in the presentation on the reduction of air pollution through improved combustor technology. This is an all-important area, and the biggest problem facing our aviation community right now is the ground idle situation, but I think in the long run, the high-temperature, nitrous oxide situation may become increasingly important. In both cases, I think it essential that the cost element of the solutions and/or alternatives be included.
3. The "Quieting the Fleet" presentation triggered some thoughts which I would like to pass on. It seems to me that, in the case of the older, low by-pass engines, they can be divided into two groups classified by installation -- the "exposed engines",

including the JT3D's on the DC-8 and 707 aircraft and the JT8D's on the 737's; and the fuselage-mounted JT8D's on the 727's and DC-9's.

There is a factor which does not seem to receive the consideration it warrants in my book -- the aircraft attitude during climbout and approach. Specifically, the "turbo machinery" noise from the front end during climbout under the revised standard ATA procedure (with no deck angle limitation) is minimal and in both the exposed and fuselage-mounted installations, the turbo machinery noise comes from the fan duct discharge -- the resultant spike that immediately precedes the jet exhaust noise. In the approach configuration ("exposed" types), however, the turbo machinery noise from the front end is obviously dominant, and full nacelle treatment would appear to be the only effective cure for that element of the noise problem.

In the fuselage-mounted case, however, it is a far different story. During climbout (ATA procedures) there is little, if any, front end turbo machinery problem due primarily to the high climbout angle and the shielding from the wing root and fuselage. There is, however, the discharge duct spike, and exhaust gas roar. In the approach configuration, again the wing root (and fuselage in the case of the 727) adequately shields the front turbo machinery output, and the biggest problem again is the discharge and exhaust elements. What this says to me is that, in the case of the 727 and DC-9, we might be able to get away with treatment of the discharge duct and obviate the expense and weight penalty of treating the front end of the nacelle. I really think this deserves some further investigation and precise measurements of inflight operations. The only concern may be the fact that the front end noise feeds back through the discharge duct and accordingly might require some element of treatment up front. If I am right, we might save a lot of money and weight in the case of the 727's and DC-9's.

A last point in this area -- I think the whole "nacelle treatment" exercise is to a large degree meaningless unless we address ourselves to the exhaust velocity problem -- either by the "refan" concept, or some form of acoustical treatment in the tailpipe. I am deeply concerned that we might be trapped by a requirement for nacelle retrofit which will be meaningless once the exhaust gas noises are isolated -- the public will not accept a retrofitted airplane with the present level of this type of noise.

Mr. Bruce Lundin
Page 3
September 24, 1973

4. With respect to the "Powered Lift" presentation, I would urge that the use of the criteria "95 PNdB, 500 ft. sideline" be abandoned and replaced by "95 PNdB from the vehicle in any direction". What concerns me is the fact that the sideline problem is no where near as important as the overflight problem, and unless we can be assured that we do not exceed this level under the flight path (both takeoff and approach), I think we are never going to sell V/STOL to the noise-conscious public. Incidentally, I personally feel 95 is too high for any airport facility in other than an industrial/commercial environment, where the ambient noise level is higher.

Again, congratulations on a great day, and I mean it when I say not to bother to acknowledge these random observations. However, if I can be of help to any of those involved, please feel free to have them contact me.

Sincerely,

A handwritten signature in blue ink, appearing to read "Jimmy Tyler". The signature is written in a cursive style with a large, sweeping initial "J".

Toledo, OH 43607

Dear Mr. Baron:

I have been asked to respond to your letter of September 20 since my area of interest is fuel cells. Enclosed you will find a copy of a recent survey of the fuel cell area. It is meant to be a semi-technical review of all the current fuel cell efforts both in and out of government.

Your question concerning our views on the use of fuel cells in automobiles is more difficult to answer. Fuel cells have been put into automobiles, vans, trucks, tractors, etc. and they work. This is no surprise but I think your question pertains more to the replacement of the internal combustion engine with fuel cell power plants. Many articles have been written on this subject and in general there is agreement that fuel cells will not replace the standard engine for some time, if at all. If you would like to speak further on this issue or have other questions in the area of fuel cells, you are welcome to call us.

Sincerely,

Lawrence H. Thaller, Head

Lewis Research Center
Cleveland, Ohio 44135

Dear Mr. Lundin:

I recently attended your "Technology In The Service Of Man" program. First, let me say that I was impressed with the way the program was handled and the level of the technical information presented. I would like to express the appreciation of our corporation for being invited to this program.

There were several items of sufficient interest that I would like to know how we can obtain more information on them. I believe that it was during the "Materials For Man" session that mention was made of a new method of predicting fatigue life on metal parts. It was called "The Strain Range Partitioning Method", if I understood correctly. Any information available on this method would be of interest to us.

During the "Clean Energy For A Better Life" session we were told that NASA is working in the advanced windmill field. We are interested in any published information which is available on this subject. We were also told that NASA is working in battery technology. We are interested in power batteries that could be used for electric propulsion of small riding tractors and lawn mowers and would like to know if you have any published information that could help us. Your interest in bringing these developments to our attention is appreciated.

Very truly yours,

BRIGGS & STRATTON CORP.

Dear Bruce:

It was indeed a pleasure being with you at Lewis Research Center on Thursday, September 20, 1973 and I enjoyed the TV interview with you which by the way was aired on Friday, September 21st on WBNS-TV, Channel 10 in Columbus on their main news program.

The 30-minute program which will again utilize your interview will take some time for editing and we will possibly be airing it sometime after the 1st of October. Perhaps I will be able to acquire the film from WBNS-TV and will be glad to send it to you for screening if you would like to see it.

We are most anxious to acquire any exhibits and/or parts from the demonstrations that you presented at the Open House. We have capable staff who would be able to interpret your interesting and important "message" on an almost daily basis as part of our lecturer-demonstration activities. I sincerely believe that this would be of great value in reaching the general public as well as possible leaders, educators, and politicians who are regular visitors to COSI.

We are currently doing this type of program by our staff in cooperation with the Atomic Energy Commission (AEC) and AEC has provided the hardware similar to the materials you used in your Open House demonstrations. AEC trained our staff and we now are carrying on the program in their and our mutual interest.

I will be out-of-town on vacation until October 10th and Chuck O'Connor our Exhibits Director will contact your offices by phone and hopefully you will direct us and help us with this project.

answered 10/3/73

Mr. Bruce Lundin

Dear Dr. Fletcher:

I am sure that you must have heard the many favorable comments about the "Technology in the Service of Man" program at your Lewis Research Center yesterday. I found the tour to be most educational, even though I have been familiar with some of the work at Lewis in conjunction with our Lake Erie International Jetport project.

As I promised, I have enclosed two brochures which explain the history and development of this concept. The engineering, economic, environmental, and financial feasibility of building a Jetport and other related developments, is now under study by the Lake Erie Regional Transportation Authority. The Authority has been funded by the Federal Aviation Administration and the Greater Cleveland Growth Association in an amount approaching \$3 million. As you might guess from our financial commitment to this project, it is a top priority for Greater Cleveland.

I have asked our Washington representative, Mr. George Thomas, to deliver to you a watercolor rendition of our concept. We are having this picture framed, and he will be in touch with you as soon as it is available.

George or I would be happy to provide any additional information which might be of interest to you.

Sincerely,

September 25, 1973

Dr. Bruce T. Lundin
Director, National Aeronautics
and Space Administration
Lewis Research Center
Cleveland, Ohio

Dear Bruce:

I attended your Technology in the Service of Man seminar at Lewis last Thursday and was tremendously impressed by the breadth of your program, the competence of the people making the presentations and the professionalism displayed in the conduct of the entire affair.

One exhibit, in which I was particularly interested, I discovered in the corner of the hangar during the few minutes I had to spend there. This exhibit concerned the work you have been doing on the prevention of turbine wheel bursts. This work is of particular interest to us because you are working with the T63/250 engine which we have in production and we are currently doing a lot of work on the causes of and cures for the fatigue crack initiation and progression. The instrumentation technique which was described in that exhibit should be very useful to us.

To that end we would like to arrange for a visit by one or two of our people to your facility at an early date. If you can give me the name of the responsible people at Lewis, we would be happy to contact them directly to establish a mutually convenient time.

Again, congratulations on an outstanding display of your programs. We are looking forward to working even more closely with Lewis in the future.

Very truly yours,

Re: INSP

Dr. Bruce T. Lundin, Director
National Aeronautics and Space Administration
Lewis Research Center
Cleveland, Ohio 44135

Dear Doctor Lundin:

I would like to formally express my congratulations to you and your staff for the well organized tour of your facilities which I took on September 20. It was obvious that the exhibits and the speakers had been carefully selected. The tour details were well handled. As it happened, I sat opposite Mr. Olsen at lunch and was able to personally extend my commendation.

I would like to obtain the name of a contact that we could make to discuss one subject. This is concerned with the Materials for Man activity. Specifically, we would like to discuss in further detail testing methods that you use, particularly involving the structural stress of materials.

Very truly yours,

Richard K. Flitcraft
Vice President,
Director, Mound Laboratory

Mr. Richard K. Flitcraft
Vice President
Director, Mound Laboratory
Monsanto Research Corporation
P. O. Box 32
Miamisburg, OH 45342

Dear Mr. Flitcraft:

Thank you for your kind letter of September 28 to Mr. Lundin about the program "Technology in the Service of Man". I recall with pleasure our luncheon conversation.

The person to contact on the subject matter "Materials for Man" including our testing methods is Mr. John C. Freche, Assistant Chief, Materials and Structures Division, telephone, 216/433-4000, extension 269.

We appreciate your interest in the Lewis Research Center and hope that we can be of help to you.

Sincerely,

Walter T. Olson
Director, Technology Utilization
and Public Affairs

September 25, 1973

Mr. Bruce Lundin, Director
National Aeronautics and Space Administration
Lewis Research Center
Cleveland, OH 44135

Dear Mr. Lundin:

I sincerely appreciate the opportunity of attending your "Technology in the Service of Man" on Wednesday, September 19. Your program, displays, demonstrations, and speakers were exceptionally professional. Without a doubt this was the most rewarding program I have attended in recent years. Your theme to advise the people of your contributions to our everyday way of life, and encouraging industry to benefit from the "spinout" of your research was very well accomplished.

I would appreciate receiving the names and phone numbers of your personnel so that I may contact them for further information that may apply to our engineering programs on the following subjects:

"Control of Fan and Airflow Noise"
"Exhaust Emissions Control"
"Energy Sources"
"Materials and Lubrications"

The considerable amount of time and money spent in preparation of this program was well appreciated, and I would suggest that continued use of this investment can be made by offering a condensed version to local technical societies. Last evening I advised the SAE Governing Board - Cleveland Section, of your program and suggested that we might borrow your displays and possibly speakers for a series of monthly meetings. If more is to come of this, the person responsible for setting up the monthly meetings will contact you personally.

Sincerely,

E. R. Sirotak
Chief Engineer

Dear Mr. Sirotak:

Thank you for your thoughtful letter of September 25 to Mr. Lundin.

The individuals to be contacted for further information on the subject matter about which you asked are as follows:

"Control of Fan and Airflow Noise" -	Earl W. Conrad	- Ext. 369
"Exhaust Emissions Control"	Richard A. Rudey	6160
"Energy Sources"	Louis Rosenblum	310
"Materials for Man"	John Freche	269
"Lubrication and Wear"	Robert L. Johnson	464

We appreciate your interest in the work of this Center and will try to make our results available and useful to you and others.

Sincerely,

Walter T. Olson
Director, Technology Utilization
and Public Affairs

College of Engineering
Department of Electrical Engineering

Sept. 26, 1973

N.A.S.A.
Lewis Research Center
Cleveland, Ohio 44135

Dear Sirs:

Two faculty members of this department attended your displays last week on "Technology in the Service of Man" and have brought back the descriptive handbook with that title.

I think it would be very worthwhile, for our purposes and yours, if this booklet could have wider distribution here. I would be grateful if you would

(1) send me one copy for myself; or

(2) send, if you can, 20 copies for distribution among the faculty and graduate assistants of this department;

(3) let me know whether you would be interested in having several hundred copies distributed among the undergraduate students in this college, and whether there would be any charges for this.

Yours sincerely,

Robert A. Chipman
Professor

Professor A. Chipman
Department of Electrical Engineering
The University of Toledo
Toledo, Ohio 43606

Dear Professor Chipman:

Under separate cover we are sending 20 copies of "Technology in the Service of Man" for distribution in your Department as you requested in your note of September 26.

If you want to distribute copies to the several hundred undergraduate students in the College of Engineering at the University of Toledo, we would be pleased to make copies available without charge to you. It will be a few weeks before we have enough copies reprinted for such distribution. Also, I suggest we attach a "buck slip" to each copy stating that the booklet describes engineering activities at a major federal facility near Toledo. Will you please let me know the number of copies, if any, you will need for this purpose.

Sincerely,

Walter T. Olson
Director, Technology Utilization
and Public Affairs

SEATTLE, WASHINGTON 98195

College of Engineering
Department of Aeronautics and Astronautics

October 3, 1973

Mr. Bruce T. Lundin
Director, Lewis Research Center
National Aeronautics & Space Administration
Cleveland, Ohio 44135

Dear Mr. Lundin:

I wish to thank you for your invitation to attend your laboratory program, "Technology in the Service of Man", which I attended on Friday, September 21. I wish also to compliment you on a most interesting and skillfully presented exposure of NASA's talents and planned future activities in this area. Without exception, in the blue group to which I was attached, all comments were favorable and there seemed to be a general consensus that we were experiencing the best program of its kind your laboratory has put on.

I am only sorry that more of the general public, and especially those who have expressed strong anti-technology feelings, could have been exposed to this excellent overview of your agency's activities in improving the environment in which we live. Might I ask whether any of the exhibits, and the engineers who so ably presented their current research activities, could be made available to universities, professional societies, high schools, etc., in the Pacific Northwest area. If there is any possibility of extending your story in this way, I will be only too happy to help coordinate the presentations in this area. I can assure you they would be very well received.

I thank you again for your invitation and for the excellence of your program.

Yours sincerely,

R. J. H. Bollard, Head
Department of Aeronautics
and Astronautics

October 15, 1973

Mr. R. J. H. Bollard, Head
Department of Aeronautics
and Astronautics
University of Washington
Seattle, WA 98195

Dear Mr. Bollard:

Thank you for your kind letter of October 3 to Mr. Lundin about the program "Technology in the Service of Man".

With regard to your query about the availability of technical information presented in the program, although the specific package that you saw is no longer available, we do have speakers, exhibits, films and literature on a variety of subjects and directed at various audiences such as universities, professional societies, high schools, etc. Normally, such information would be provided to the Pacific Northwest area by our Ames Research Center, Moffett Field, California 94035, telephone 415/965-5000. Where the subject is sufficiently specialized that the Lewis Research Center, which is NASA's Center for aerospace propulsion and power technology, would be the appropriate source, the information could be made available from here. We have preliminary motion picture footage on the presentations that you attended on September 21, and we will try to develop them into useable films. At this writing, I do not know how that effort will work out. We will correspond with you further about it.

Your offer to help make presentations in your area is very much appreciated. I think that the best way for us to move is for you to let either us or the Ames Research Center know of specific occasions and audiences for which a program is sought. We would then be able to determine the most helpful thing to be done.

Many thanks for your supportive comments and offer.

Sincerely,

Walter T. Olson
Director, Technology Utilization
and Public Affairs

Cleveland, Ohio 44135

Dear Dr. Olson:

While my impressions are still fresh, I want to tell you how much I enjoyed the program "Technology in the Service of Man" that I participated in on September 20.

The program was very informative and well designed. Frankly, at the end of the day, I was rather exhausted in just staying alert to absorb all that interesting information that was presented.

One area of particular interest to us is your work on wear and lubrication. We plan to take advantage of your expertise in this area in the design of improved turbine lubricants in which we have a commercial interest.

As a citizen, I wish to express my appreciation for your new direction oriented to the "Service of Man". As you direct your outstanding capability to these societal projects, I cannot help but feel that NASA and the society both will benefit.

On behalf of Stauffer Chemical Company, I wish to thank you for the opportunity of being included in your outstanding program.

Sincerely,

A handwritten signature in cursive script that reads "J. C. H. Hwa".

September 25, 1973

Mr. Bruce Lundin
Director
NASA Lewis Research Center
21000 Brookpark Road
Cleveland, Ohio

Dear Bruce:

The 1973 inspection at Lewis was superb and was carried out in the best NACA/NASA tradition of excellence and perfection. It did give me some pain, however, to hear the underlying plea for appreciation by the public for the research efforts and accomplishments of the organization, especially in view of its spectacular achievement. I guess the budgetary affairs of past and recent months disproves the old mousetrap adage - at least as applied to accomplishment in research.

Of particular interest to me was the presentation on the Quiet Propulsion Life Engine and of the speaker's reference to digital circuitry to be used to coordinate the control of a multiplicity of engine operating parameters. I would be interested in learning more about this portion of the project. Is the data system being developed at Lewis, within greater NASA, on contract, or possibly under a university research grant? If possible, I would like to discuss this in greater detail with suitable individuals.

Again - congratulations to you and the Lewis staff.

Kindest regards,

H. W. Mergler
Professor of Engineering

Ref: BLR9-828

Mr. Bruce T. Lundin
Director
NASA-Lewis Research Center
Cleveland, Ohio

Dear Mr. Lundin:

My sincere compliments to you and your capable staff for the open house entitled, "Technology in the Service of Man".

The group I joined yesterday was mostly from local nonaerospace businesses. There were a number that went on the tour to "see how their tax money was being spent". The reaction in our group was very favorable, so I got the impression that your efforts were successful with those who attended.

However, I could not help but wish that your message could be told to a much larger audience, ideally on national television. To help spread the coverage, I was hopeful of obtaining a film that I might show to local groups such as our Company Management Club along with their wives.

I talked to some of your tour guides about the availability of such a film and I got the impression that most of the NASA films are oriented to aerospace technology per se. The public needs to understand that there are many benefits other than, "we put a man on the moon" or "we had three men in orbit for 59 days" or "we are going to the planets", etc. I'm afraid that the general public is reacting to that in the manner of "who needs it".

I am hopeful to locate a film that illustrates the nonaerospace "spin-off" benefits such as you illustrated in your open house. I think the public should be better informed on the advancements made in the fields of communications, transportation, computers, orthopedics, energy conversion, textiles, medicine, natural resources, weather, and many others.

Forwarded to Cal Weiss by W.T. Olson 10/1/73 for follow-up.

Dr. Edwin Pounder
Acting Manager
Mariner Mars 1971 Project
Jet Propulsion Laboratory
California Institute of Technology
4800 Oak Grove Drive
Pasadena, CA 91103

Dear Dr. Pounder:

This is just a note to tell you that the photo-mosaicked globe of Mars that Jet Propulsion Laboratory prepared for Lewis Research Center arrived in time to be featured at the September 19-21 program "Technology in the Service of Man". Subsequent Open Houses brought a total audience of 22,000 people to the Lewis Center between September 19 and October 9; most of these people saw the globe and the related exhibit materials.

The globe is a beautiful and instructive item. We are most appreciative of the professional and technical skills that made it possible. We expect many more people to see it in the months and years ahead.

Many thanks to you and your organization for effectively processing the work involved.

Sincerely,

Walter T. Olson
Director, Technology Utilization
and Public Affairs

Dear Dr. Lundin:

I want to tell you how much I appreciated the invitation and the opportunity to attend the presentation of your "Technology in the Service of Man" on September 21. As your records might indicate, I have been an invitee for many years and this program was the greatest in all respects. I admit we learn from experience on how to make these presentations more interesting and attractive but you took a big step forward in this one.

I have already been in touch with Dr. Ted Olson respecting some thoughts that I wanted to make known to him which specifically fall into the area of communications with the interested citizens who represent industry and commerce and those of us who would also like to be better informed on a more regular basis of the progress that NASA is making and on projects that are receiving your consideration. All of us in the corporate field are accustomed to some character of an annual report which gives the stockholders an opportunity to evaluate the progress made.

Again, many thanks for the enlightening opportunity that you gave us, and I hope to be able to attend another similar occasion in due course.

Sincerely

ATTN OF: CD

OCT 5 1973

Mr. Bruce T. Lundin
Director
NASA, Lewis Research Center
Cleveland, OH 44135

Dear Bruce:

My colleagues and I thoroughly enjoyed our visit to Lewis. We were especially impressed by the high level of competence which characterized the lecture-demonstrations arranged for the Open House program. I am sure that many other visitors shared our pride in the progress which your Center continues to achieve.

Dr. Fletcher remarked that some of the demonstrations would be very useful in the public education program which we operate at our Visitors Center. Incidentally, we greeted the seven-millionth tour patron September 27.

I assume that you will put to good use some of the items displayed during the Open House in connection with your visitor activities. But in view of the Administrator's keen interest, which I fully endorse, are there any models or exhibits which you might share with KSC? I found particularly intriguing those displayed in connection with your work in clean energy, quieting the fleet, powered lift, cleaner skies and materials for man. Short of the hardware, working drawings from which we might fabricate displays would be of use to us.

I can assure you a large and interested audience who would profit from learning of the good work being carried on by your Center.

Sincerely,

Kurt H. Debus

October 9, 1973

Bruce T. Lundin, Director
NASA Lewis Research Center
21000 Brookpark Road
Cleveland, Ohio 44135

Dear Bruce,

Back in place, finally after our trip that extended to Minneapolis upon completion of my sessions in Cleveland with Abe Silverstein and Irv Pinkel PLUS attendance at the Friday presentation of "Technology: In the Service of Man", I hasten to voice my enthusiastic reaction to the '73 version of the old Inspections, and to add my thanks for all the courtesies extended me, by you and Gene Manganiello and Ann Barber and Jim Modarelli especially.

Focusing for a minute on the Inspection program ... I would be hardput indeed to find matters to be critical about; the young men from Lewis (and I expect you will understand why I refer especially to those from Lewis) had their presentations letter perfect, so that they could be made without reference to notes, but nevertheless in a style of delivery that avoided any appearance of being by rote. Surely, Dr Ames, who in the first instance set the style and tone of the Conference/Inspection sessions, and Dr Victory, who in later years was the indefatigable preceptor of what was right and what was not, could have been proud that their traditions have been held so high.

There were three matters touched upon that, I expect, will have special relevance to the history I'm working on. One...reference to the statement by one of Jules Verne's fictional characters, that one day hydrogen would be used for fuel/energy I have sufficiently researched to require no additional assistance. But the other two, I do need help on! They are:

(1) The allusions, in the Impact of Wear presentation, about the essentiality of the tallow daub to the first wheels comprise an excellent example of how one thing depends upon another. If I could be sent that portion of the Impact of Wear text, I'd be grateful.

(2) In the Clean Energy presentation, a slide was shown, of a large windmill in Puerto Rico. Here, if possible, I'd like the section of text about the windmill, an indication of what NACA airfoil section was chosen, and why, and a print of the picture of the windmill. (Respecting the windmill airfoil section, I'd like to know when it was developed, too.)

You may be interested to learn that this time, my tapes do contain words spoken during the Silverstein and Pinkel interviews. Once the transcriptions have been completed (actually, the way I'm having it done, by my former secretary on the West Coast, it's a fairly time consuming process) I'll forward copies.

Again, Bruce, my ~~XXXXX~~ sincere thanks, and with best wishes,

Yrs,

Walt
